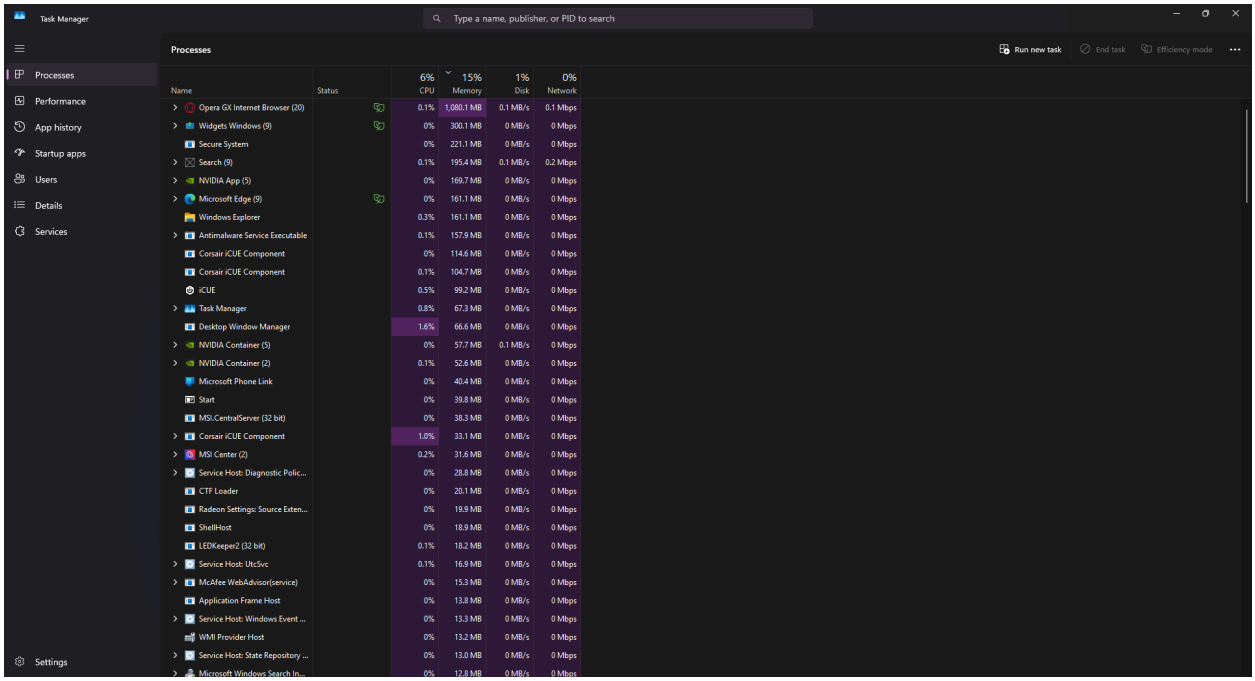
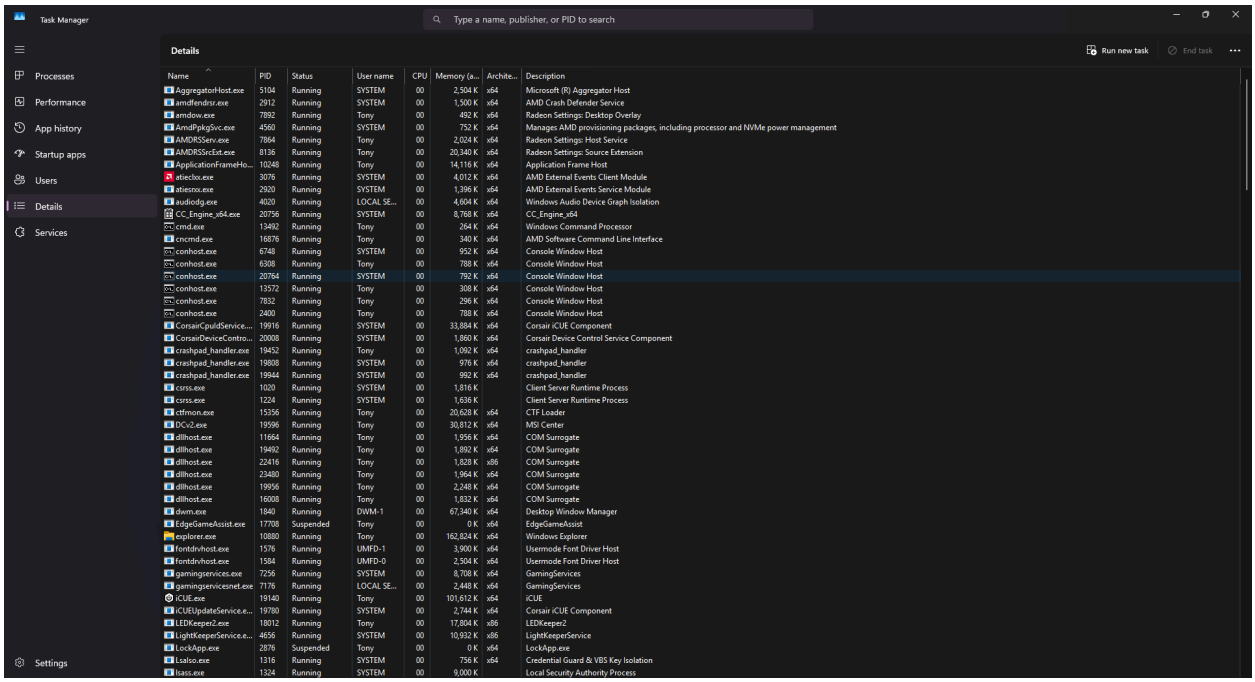
OS Windows - Processus

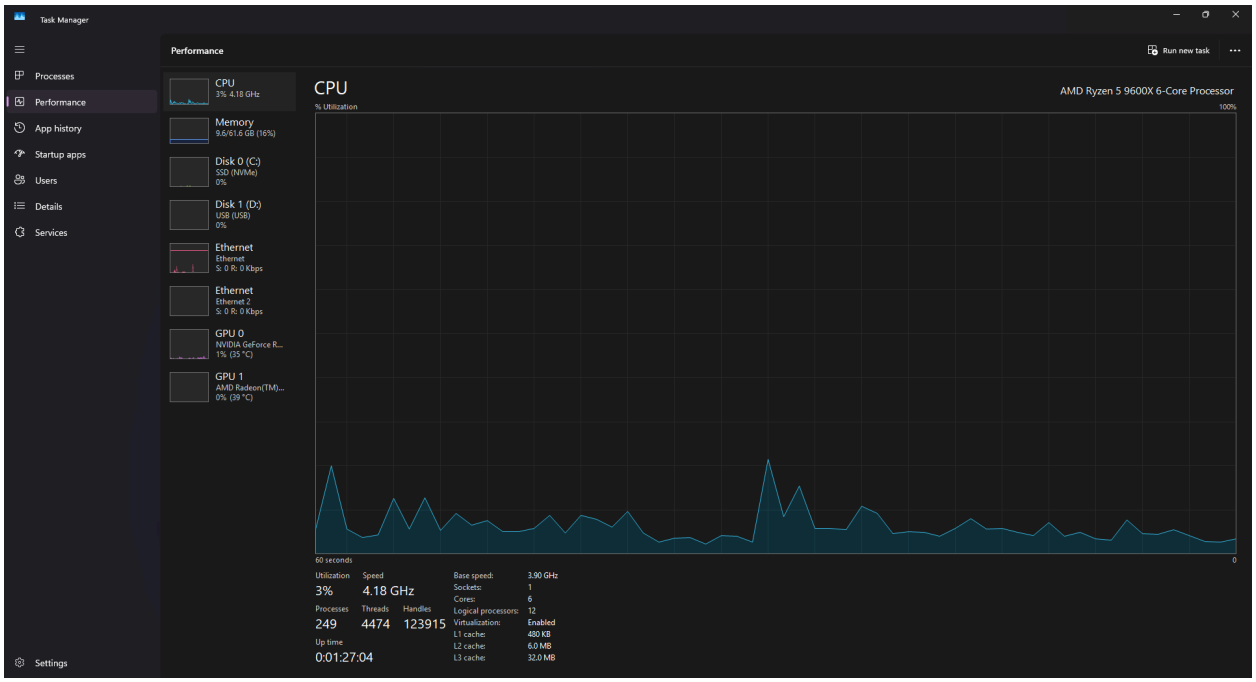
1. J’ouvre le gestionnaire des tâches.



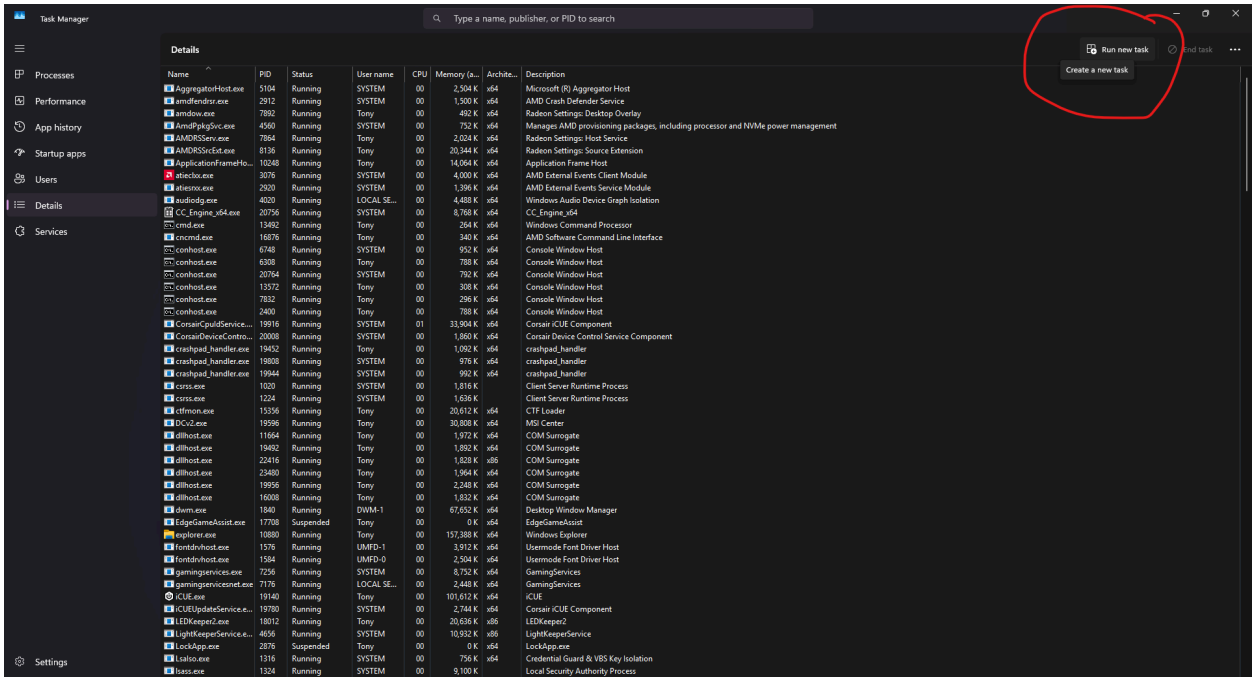
2. Je vais dans détails



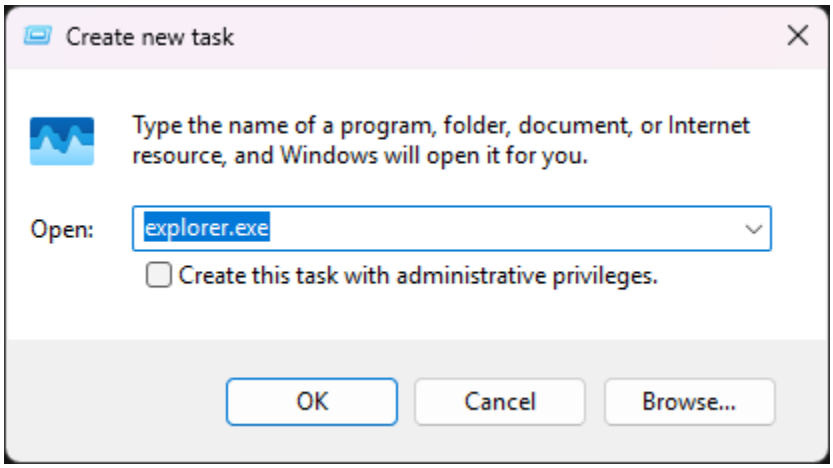
3. J’explore l’onglet “performance”



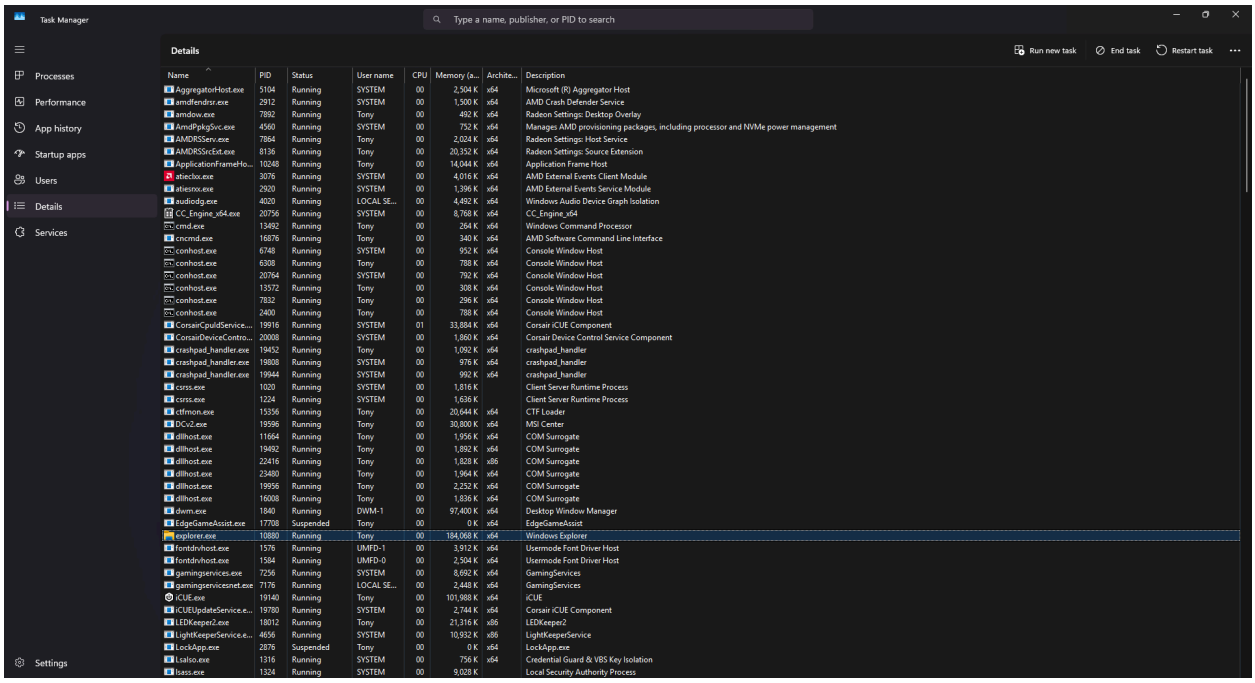
4. Je clique sur “éxécuter une nouvelle tâche (comme mon ordinateur est en anglais je clique sur Run new task)



5. J’écris explorer.exe. Lorsque j'exécute, une fenêtre d’explorateur de fichier s’ouvre.

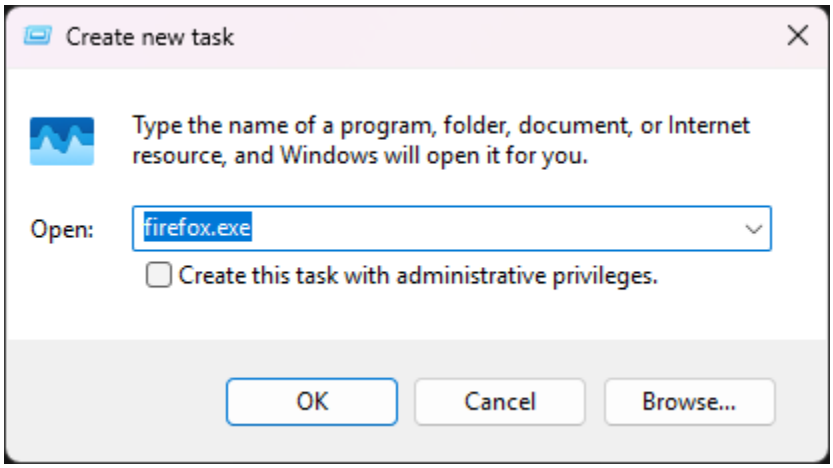


6. Le PID de cette fenêtre est 10880.

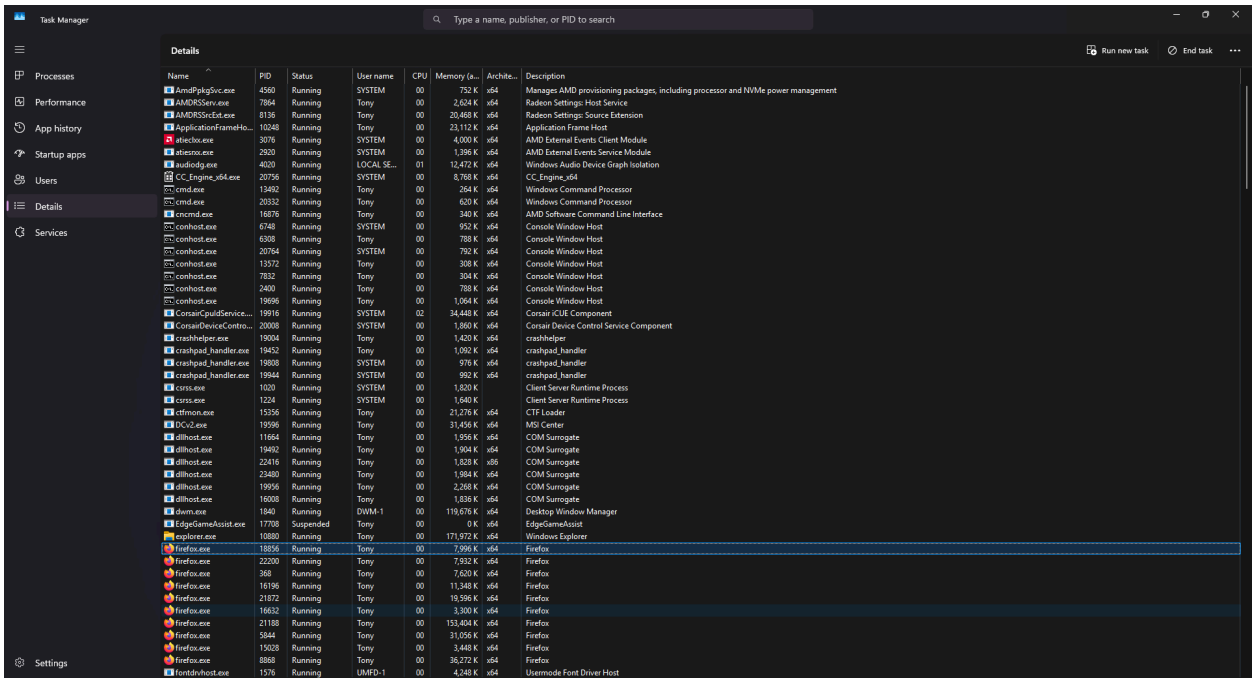


7. Si je sélectionne “fin de tâche”, le programme s’arrête.

8.

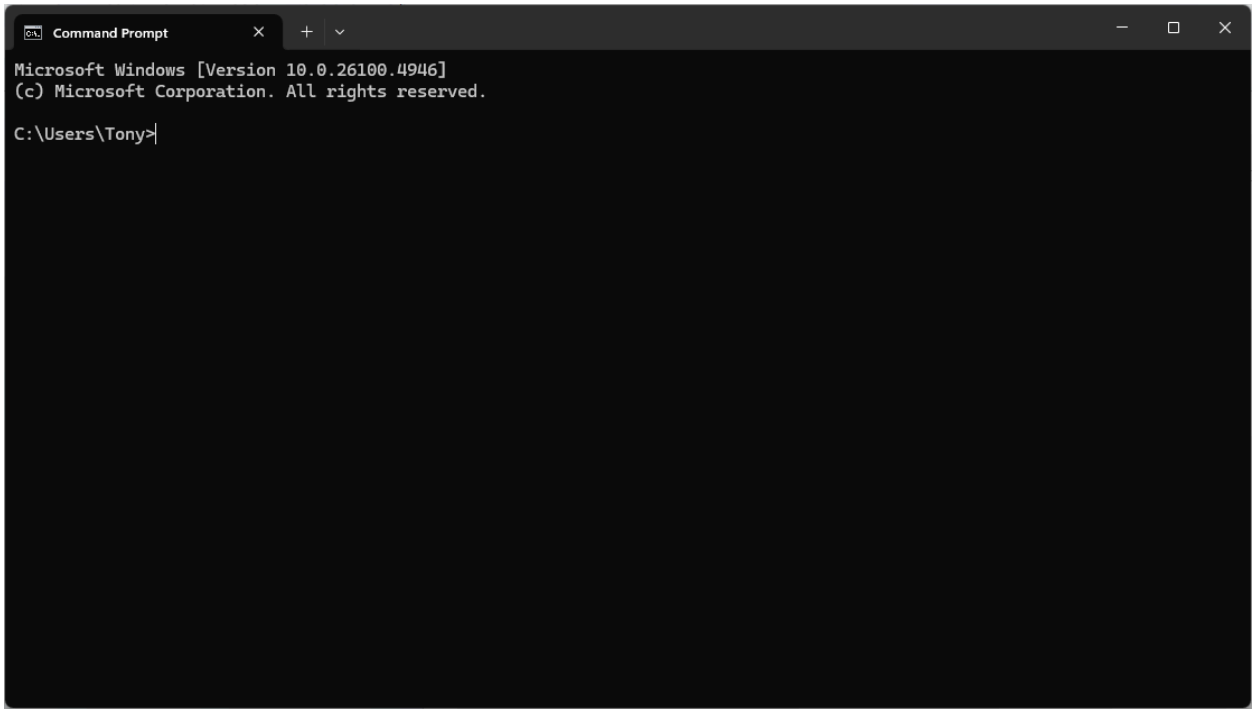


Je clique sur “ok” et une fenêtre firefox s’ouvre.
Le programme firefox possède plusieurs processus.

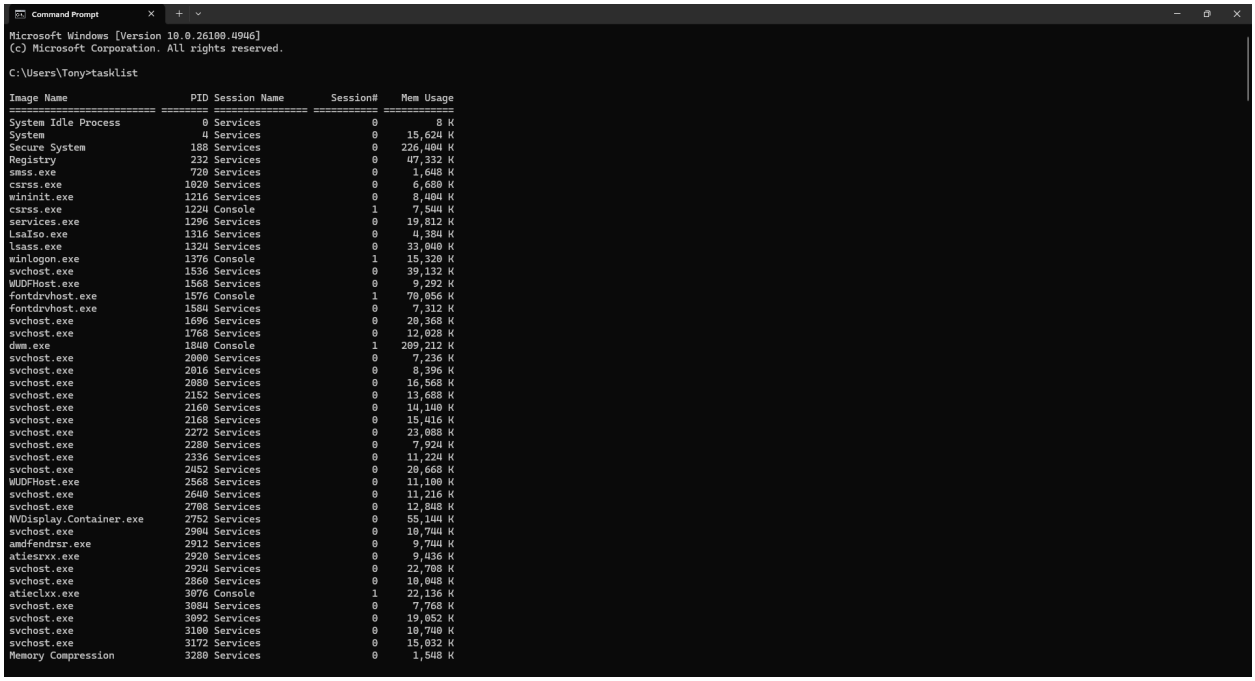


Invite de commande

1. J’ouvre l’invite de commande



2.



3.

```
C:\Users\Tony>tasklist | findstr "firefox"
firefox.exe                  21188 Console                    1    287,612 K
firefox.exe                   5844 Console                    1     87,132 K

```

4.

```
Command Prompt

C:\Users\Tony>tasklist /?

TASKLIST [/S system [/U username [/P [password]]]]
         [/M [module] | /SVC | /V] [/FI filter] [/FO format] [/NH]

Description:
    This tool displays a list of currently running processes on
    either a local or remote machine.

Parameter List:
   /S     system          Specifies the remote system to connect to.

   /U     [domain\]user   Specifies the user context under which
                          the command should execute.

   /P     [password]      Specifies the password for the given
                          user context. Prompts for input if omitted.

   /M     [module]        Lists all tasks currently using the given
                          exe/dll name. If the module name is not
                          specified all loaded modules are displayed.

   /SVC                   Displays services hosted in each process.

   /APPS                  Displays Store Apps and their associated processes.

   /V                     Displays verbose task information.

   /FI    filter          Displays a set of tasks that match a
                          given criteria specified by the filter.

   /FO    format          Specifies the output format.
                          Valid values: "TABLE", "LIST", "CSV".

   /NH                    Specifies that the "Column Header" should
                          not be displayed in the output.
                          Valid only for "TABLE" and "CSV" formats.

   /?                     Displays this help message.

Filters:
    Filter Name     Valid Operators           Valid Value(s)
    -----------     ---------------           --------------------------
    STATUS          eq, ne                    RUNNING | SUSPENDED
                                              NOT RESPONDING | UNKNOWN

    IMAGENAME       eq, ne                    Image name
    PID             eq, ne, gt, lt, ge, le    PID value
    SESSION         eq, ne, gt, lt, ge, le    Session number
    SESSIONNAME     eq, ne                    Session name
    CPUTIME         eq, ne, gt, lt, ge, le    CPU time in the format
                                              of hh:mm:ss.
```

5.

```
